

Spot on fact migration and diversity

Nr. 1 Comprehension

a)

b)

Nr. 2 Working with visuals

a)

The chart shows the reason for immigration in the UK and is split into two sections. Both sections show the same categories. The right sections show the figures corresponding to people coming out of another country of the EU. The left side shows correspond to people from different countries.

The first category is called "definite job". 45% of the people coming from the EU have a definite job in the UK were as only about half as many people (23%) from not EU nations already have a job in the UK. 27% of EU citizens are looking for a job when they enter the UK. Only 9% of not EU citizens are doing the same. But 21% of people coming from outside the EU accompany someone to the UK; only 9% of people from the EU want to do that. People from non-EU nations want more often to study in the UK: It is 41% against 13% on the EU side. Both parties have only 6% on other reasons.

It is clearly visible that EU citizens are more interested to work in the UK were as non-EU citizens more likely want to study there.

b)

The bar chart shows the development of society from 2014 to 2050 looking one the allocation of different groups of people.

The chart shows that the population of black people in the USA will basically be constant (decrease of about 1%). Interesting seems that the white population will decrease significant by 6% were as the Hispanic group will grow by about 9%.
